

# our commitment to alternative energy

Joseph E. Bonadiman & Associates, Inc. has a firm commitment to alternative energy projects. In the last decades, we have lent our expertise for the development of solar fields, wind generation facilities, hydrogeneration systems, cogeneration systems, waste-heat-boiler systems, and bisoilids facilities.

In the last three years, we have provided Civil Engineering & Land Surveying services to clients such as NRG Energy, eSolar, First Solar, U.S. Solar, Sunpower, and Tessera Solar (among others) for large-scale solar generating station sites in the Southwestern U.S.

These projects include a 92 Megwatt (MW) solar field in Los Angeles County, CA, a 22 MW solar field in Riverside County, CA, a 20 MW solar field in San Diego County, CA, and a 92 MW solar field in New Mexico.

Our services for these projects have included site layout & design, grading, field & aerial surveys, construction staking, hydrology studies, floodplain simulations, water quality documents, cost estimates, applications coordination, and project management assistance.

In addition, we have provided clients with preliminary site research/investigations and “fatal flaw” analyses for dozens of potential solar sites in California, Arizona, and New Mexico.

We believe these projects demonstrate our long-term commitment to the innovative technologies that promise a brighter, cleaner future.
